IN THE SPECIFICATION

Please replace the paragraph located on page 34, line 18, of the specification with the following:

-- Cool ICE Service Handler 332 makes an access request of Cool ICE service portion 340 of repository 342 via path 338. It is within Cool ICE service portion 340 of repository 342 that the command language script corresponding to the service request is stored. The command language script is obtained and transferred via path 336 to service handler 332 for execution. Along with the command language script, a security profile, if any, is stored for the service request. As explained in U.S. Patent Application Serial No. ~~09/188,549~~ 09/188,649, filed November 9, 1998, the security profile, if required, is added to the command language script file at the time of service request development by the service request developer. This security profile identifies which of the potential service requesters may actually be provided with a complete response. The security profile, if any, is similarly transferred to the service handler 332, via path 336. --
